Username: Botball-2019

Password: Sickobamba79

Experience Gained
- Ability to build a working robot that achieves the purpose.
- Relying on the team to work together and get the job done.

Documentation Process
- Build and coding team will read over documentation and understand what each other did, appreciating the full value of each other's works and the teamwork that was required in the building process.
- People who didn't fully understand the process of coding or building (why what we did did or did not work) will then have more of an understanding and a better chance to create more successful robots in the future

Surprises
- One surprise that arose during our building stages was the difficulty of creating and making each subsystem, making sure that they function properly and don't contradict each other
- Another surprise we ran into further down the road was coding, it was more complex than anticipated and took longer than our team had hoped
- Need to adapt and change during the course of the season.

Advice For Future Teams

- Some advice would be to make sure they use their time wisely, effective time management played a key role in our progression
- We would also warn to teams to make sure everybody gets a break time in order to keep people on task, de-stress, and effectively bond as a group
